CABBAGE PLANTS.

Important to Growers of Early Cabbage.

A Crop of Cabbage Produced Ten Days to Two Weeks Earlier than you are now Producing yours, Would Make You Double the Profit.

By using our **HARDY FROST-PROOF CABBAGE PLANTS** you can mature a crop of cabbage ten days or two weeks earlier than they can be grown from plants raised in hot-beds and cold frames, for the reason that our **HARDY FROST-PROOF CABBAGE PLANTS** can be set in the field before danger of frost and freezes is past. (This cannot be done with cold frame plants.) They become rooted and established while the land is still cold, and as soon as spring weather opens up the established root growth assimilates the fertilizer, the plants grow off rapidly and mature a head cabbage from ten days to two weeks earlier than your earliest cold frame plants.

We can Fill Orders any time from December 1st to April 15th.
